Ibiqs On-Screen eQMS - Medicinal Cannabis

Overview

The medicinal cannabis industry is rapidly growing with many opportunities to innovate and be early adopters of disruptive technologies. Many newcomers feel overwhelmed by the regulatory requirements of Good Agricultural and Collection Practices (GAPs or GACPs) and Good Manufacturing Practices' (GMPs). QikSolve provides a perfect solution with a low upfront cost and for successful businesses the ability to scale. Our pre-populated QMS is now "electronic" making paper redundant. Ibiqs, which is built on Microsoft's Office 365 and can be hosted in the cloud or on premise, or both, offers compliance certainty and visibility to all quality and business processes and record keeping. All systems ship with a prepopulated QMS written specifically for the medicinal cannabis industry by our partners at PharmOut, world leaders in Good Manufacturing Practice.

Key Benefits

+ **Reduced set up** costs to writing your QMS, it's pre-populated on screen for you to edit and modify to suit your business needs and process flows in your grow house and head house.

+ **Reduced** your administration costs with centralised documentation and process management across your business, all done on screen

+ Work more **efficiently** with powerful collaboration tools and the ability to work from anywhere with Office 365

+ Improved **control**, accountability and visibility in to your processes with powerful reporting tools from Power BI

+ **Save** time looking for information with improved search and 'findability' and all your information in a central location

The Ibiqs solution pathway

On-Screen electronic Quality Management System	Electronic document and record management system	Ibiqs® electronic Quality Management System

On Screen electronic Quality Management System

Office 365 site template for Medicinal cannabis - A$20,000

Employee management	Change management	Lite Document management	Incident management	Audit management	Asset management	Site management

Your entire QMS available on screen from any location in the world or at the far end of your grow house, which means your team can access critical instructions or upload any information. Using the enterprise grade cloud-based Office 365 platform to manage the control and compliance of your Quality processes, means your get to maintain your systems and business processes with confidence.

Information rights management and data loss prevention stop access to information by non-verified users and the ability to **time-bomb** documents to ensure they are not kept beyond their intended use mean your critical data is safe. The advanced security and systems management provided by Microsoft you can rest easy that your backup and recovery is in hand if you ever need it.

With emails notifications and simple dashboards users never have to look far to see the status of a process or follow up on a key Quality action. Built in approval with **Microsoft Flow** ensure that your processes are maintained and robust and the right users are involved at the right time.
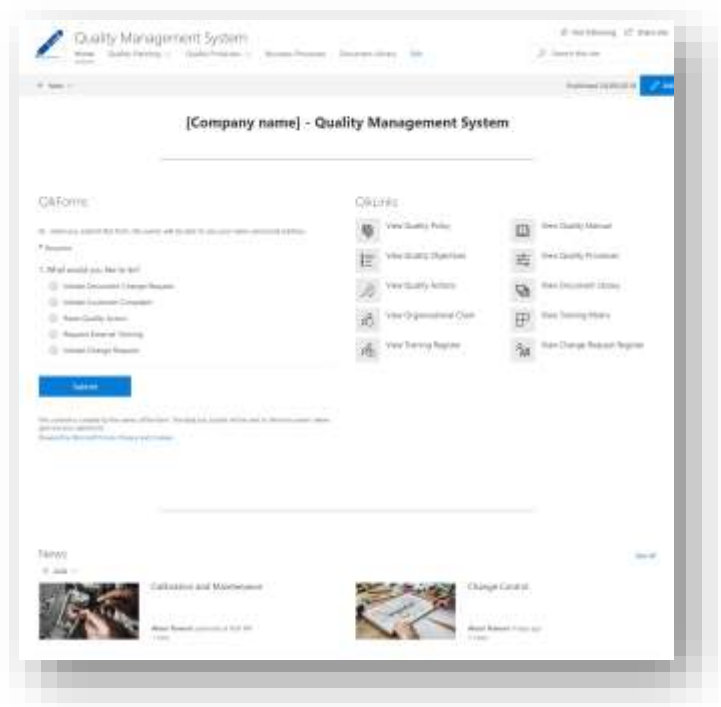

The system includes

Workspace for sharing and collaboration – Users can work together seamlessly

Enterprise grade security and control – your data is controlled, and risk is managed

Notifications and dashboards – keep everyone on top of their tasks

Approval routing – documents can have a defined approval pathway
