

Preparing a Contamination Control Strategy

Ashley Isbel

PharmOut
Regulatory Knowledge, Practically Applied.

Hosted by PharmOut

GMP FORUM

Background

Annex 1 requirement

Previously not explicitly stated

Little guidance has been available on content detail or preparation

Different approaches have resulted

Help is here for harmonising the approach – we're going to look at a recently available free tool

Guidance and Example Docs

- PHSS (*Pharmaceutical and Healthcare Sciences Society*)
 - In 2018, published a “white paper” on control strategy for contamination in sterile facilities. This paper has only ever been available to PHSS members (AU\$195 per year) at a cost of approximately \$18.
- A3P (*Association pour les Produits Propres et Parentéraux – Association for Clean and Parenteral Products*)
 - In mid 2021, published a concept case study approach to CCS preparation
 - <https://www.a3p.org/en/contamination-control-strategy-practices-a-case-study-of-a-ccs-implementation/>
- ECA Foundation
 - In January 2022 published two comprehensive documents
 - ECA Task Force Contamination Control Strategy Guideline (PDF)
 - ECA Task Force Contamination Control Strategy Template (Word document)
 - Both documents can be downloaded for free (with registration) from the ECA Foundation website. The template is also provided as part of the guideline PDF.

ECA Task Force (CCS)

ECA is European (German-centred) organisation, which influences the make up of the task force. It is comprised of:

Industry experts (Lily, Boehringer Ingleheim, GE Healthcare, CSL Behring, Steris)
Eminent consulting experts
WHO representation

What is a Contamination Control Strategy?

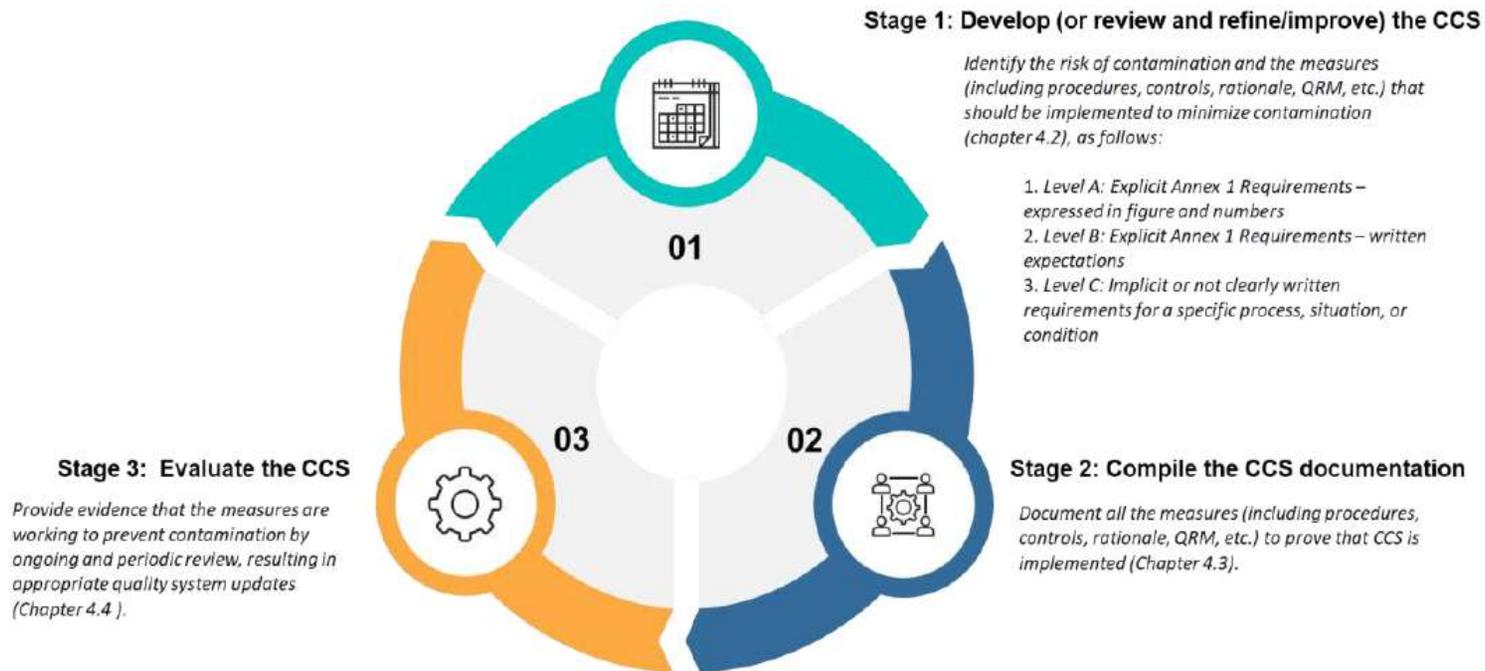

- "Contamination Control Strategy (CCS) – A planned set of controls for microorganisms, pyrogens and particulates, derived from current product and process understanding that assures process performance and product quality. The controls can include parameters and attributes related to active substance, excipient and drug product materials and components, facility and equipment operating conditions, in-process controls, finished product specifications, and the associated methods and frequency of monitoring and control."

Elements of a CCS

Not intended to be comprehensive. Additional suggestions include viral safety and pest control, among others

The ECA Foundation Approach

Aligns with FDA 3 stages of validation

Existing vs New Facilities

ECA recommend a decision tree to assist with understanding the level of effort required for your stage of facility/process maturity.

The less mature a site is the more work is required at Stage 1

Stages 2 and 3 look similar regardless of maturity

Stage 1 – Develop the CCS

- The guide outlines a 6-step process aligned with the principles of Quality Risk Management, to assist with the systematic application of the development phase
 1. Understand the impact of a change in elements of the CCS
 2. Identify what could present a risk for product and/or patient safety
 3. Develop measures to eliminate the risks or reduce them to an acceptable level (residual risks) or to provide evidence that the risks are under control
 4. Perform and/or implement the measures and ensure the resulting tasks and procedures are reliably implemented
 5. Document the evidence of the actions taken – *allows stage 2*
 6. Evaluate the effectiveness of the measures (e.g., controls, procedural, structural, etc.) in place and identify improvements to be implemented where needed – *establishes the principles for stage 3.*

Stage 1 – Develop the CCS

Steps 1-3 are risk / gap assessment related activities

Step 4 is the implementation of risk mitigation or regulatory obligation, and may include:

- Qualification of related systems
- Validation of manufacturing processes, cleaning, decontamination, sterilization processes, etc.
- Monitoring
- Preparation and implementation of Standard Operating Procedures (SOPs)
- Definition, implementation of the controls (e.g., In-Process-Control "IPC", QC release testing)
- Training of personnel

Step 5 is the compilation of evidence

Step 6 is the evaluation for effectiveness checking and continuous improvement

Stage 1 – Develop the CCS

- ECA “Degree of Detail” (of QRM effort) levels for Annex 1 requirements

| Level | Description | Example | Relative Degree of Detail |
|-------|--|--|---|
| A | Explicit requirements: expressed in figures and numbers | Limit values | Typically minimal QRM, except where strict compliance cannot be maintained |
| B | Explicit requirements: described in words | Unequivocal statements with minimal ambiguity | Increased levels of QRM, especially where statements may have different interpretations for different circumstances |
| C | Implicit or unclearly defined requirements for a specific process, situation, or condition | Requirements featuring equivocal statements, such as “... should be considered” or “may ...” | High levels of QRM, used to determine and justify the approaches taken where optional activity is stated |

Stage 1 – Develop the CCS

So,
basically

Prepare assessment(s) that assess each element of the CCS for your facility against the (relevant) requirements of Annex 1

Use the “Degree of Detail” levels to determine the level of evidence, risk management or other justification that may be required to support the implemented strategy

Collate the evidence, etc. available for a single source document

Initiate a periodic review that will incrementally re-assess

Stage 2 – Compile the CCS

When compiling and preparing the CCS the central document should be developed as a narrative to describe the strategies in place.

Instead of being the repository for all of the information (which would become unwieldy), the central document should reference evidentiary documents including:

- Risk Assessments / Risk Analyses
- Qualification and Validation reports
- Maintenance programs (including calibration programs)
- Monitoring and controls plans (e.g., IPC, QC release instructions)
- SOPs / policies / working instructions, etc.
- Master batch records, product specifications (e.g., QTPP document), and release specifications
- Raw or starting material specifications
- General QA documents
- Approved documents, rationales, strategies, etc.
- Monitoring results
- Trending results and reports (e.g., historical EM, Continuous Process Verification "CPV," etc.)
- Complaint management and complaints related to potential contamination during manufacturing, e.g., foreign particulates

Stage 3 – Evaluate the CCS

Annex 1 explicitly requires ongoing lifecycle evaluation of the CCS. There is no guidance in the Annex on frequency or format

The manufacturer may decide on the format, however, it should be proceduralised

The manufacturer may decide the frequency, but use QRM principles to determine this, considering that evaluation may be prompted also by:

- Change in the process; the change control should trigger the review of the existing risk assessments where necessary.
- Deviations that may conclude that the contamination program in place is lacking and trigger the review of existing risk assessments where necessary.
- Introduction of new equipment, a new product that would lead to the creation or review of existing risk assessments
- Results from routine data trending and analysis that indicate a potential gap in the CCS

ECA Tools

- ECA have provided a gap assessment template in the guideline to assist with the steps 1-3 of Stage 1.

| Key areas | Key elements | Detailed CCS Elements | Annex 1 draft reference | Identified potential gaps (or documentation improvement need) versus Annex 1 draft expectations | Key supporting site strategies, rationales, risk assessments Include reference and title | Key site procedures Include reference and title |
|-----------|--------------|-----------------------|-------------------------|---|---|--|
|-----------|--------------|-----------------------|-------------------------|---|---|--|

- This information then forms the basis of preparation for the central document narrative

ECA Tools

ECA have provided a CCS template, based on the Feb 2020 draft of Annex 1

Table of Contents*

| | |
|---|----|
| 0. → Introduction..... | 22 |
| 0.1. → Objective..... | 22 |
| 0.2. → Definitions and Abbreviations..... | 23 |
| 1. → Design of both, the plant and processes..... | 24 |
| 1.1. → The Processes..... | 24 |
| 1.1.1. → Terminally Sterilized Products..... | 24 |
| 1.1.2. → Aseptic Manufacturing..... | 25 |
| 1.1.3. → Low Bioburden Processes/ Bioburden-Controlled Processes..... | 25 |
| 1.2. → The Plant..... | 26 |
| 1.2.1. → General..... | 26 |
| 1.2.2. → Terminally Sterilized Products..... | 26 |
| 1.2.3. → Aseptically Manufactured Products..... | 26 |
| 1.2.4. → Low Bioburden Processes/ Bioburden-Controlled Processes..... | 27 |
| 2. → Processes and Equipment..... | 27 |
| 2.1. → Premises..... | 27 |
| 2.2. → Equipment..... | 27 |
| For minor equipment, consider making reference to the SMF - An copy from SMF..... | 27 |
| 3. → No. 3 is empty - left out - in Annex 1 Draft..... | 27 |
| 4. → Personnel..... | 28 |
| 4.1. → General..... | 28 |
| 4.2. → Gowning Requirements..... | 28 |
| 4.3. → Clean Room Clothing..... | 28 |
| 4.4. → Personnel Monitoring..... | 29 |
| 5. → Utilities..... | 29 |
| 5.1. → Water..... | 29 |
| 5.1.1. → Purified Water..... | 29 |
| 5.1.2. → WFI..... | 29 |
| 5.2. → Steam..... | 30 |
| 5.3. → Gases..... | 30 |
| 5.3.1. → Product-contact compressed air (direct or indirect product contact)..... | 30 |
| 5.3.2. → N ₂ | 30 |
| 5.3.3. → CO ₂ | 31 |
| 5.3.4. → O ₂ | 31 |
| 5.3.5. → Further Gases..... | 31 |
| 6. → Raw Material Controls—including in-process controls..... | 31 |
| 6.1. → Raw Material (Starting Material) Controls..... | 32 |

| | |
|--|----|
| 6.2. → In-Process Controls..... | 32 |
| 7. → Product Containers and Closures..... | 32 |
| 8. → Vendor approval—such as key component suppliers, sterilization of components and single use systems (SUS), and services..... | 33 |
| 8.1. → General processes..... | 33 |
| 8.2. → Detailed information regarding vendors..... | 33 |
| 9. → For outsourced services, such as sterilization, sufficient evidence should be provided to the contract giver to ensure the process is operating correctly..... | 34 |
| 9.1. → General processes..... | 34 |
| 9.2. → Detailed information regarding suppliers..... | 34 |
| 10. → Process Risk Assessment..... | 35 |
| 11. → Process Validation..... | 37 |
| 12. → Preventative maintenance—maintaining equipment, utilities, and premises (planned and unplanned maintenance) to a standard that will not add the significant risk of contamination..... | 38 |
| 13. → Cleaning and Disinfection (Decontamination and Sterilization)..... | 39 |
| 13.1. → Equipment..... | 39 |
| 13.2. → Clean Rooms/ Clean Areas..... | 40 |
| 13.3. → Clean Room Clothing..... | 40 |
| 14. → Monitoring Systems— including an assessment of the feasibility of the introduction of scientifically sound, modern methods that optimize the detection of environmental contamination..... | 40 |
| 14.1. → General Procedures..... | 41 |
| 14.2. → Monitoring of Systems..... | 41 |
| 14.2.1. → Ware and Steam..... | 41 |
| 14.2.2. → Clean Rooms..... | 42 |
| 14.2.3. → Gases..... | 42 |
| 14.3. → Personnel..... | 43 |
| 15. → Prevention—trending, investigation, corrective and preventive actions (CAPA), root cause determination, and the need for more comprehensive investigational tools..... | 43 |
| 16. → Continuous improvement based on information derived from the above..... | 44 |
| 17. → Further relevant aspects, e.g. about viral safety..... | 44 |

ECA Tools

- The template provides a series of (empty) tables to help prompt for the types of information that might be included in each section. Some examples below

4.2. → Clean Room Clothing¶

| Description¶ | Reference Documents¶ | |
|---|----------------------|------|
| | Title¶ | No.¶ |
| Material, quality, and design of clean room clothing is adequate for the respective clean room Grade¶ | □ | □ |
| Changing and replacement of clean room clothing¶ | □ | □ |
| Cleaning of clean room clothing¶ | □ | □ |
| Sterilization of clean room clothing¶ | □ | □ |
| Validation of the sterilization process¶ | □ | □ |

13.2. → Clean Rooms / Clean Areas¶

| Room No./Area¶ | Grade¶ | Activity¶ | Reference Documents¶ | |
|----------------|--------|---------------|----------------------|------|
| | | | Title¶ | No.¶ |
| □ | A¶ | Cleaning¶ | □ | □ |
| | | Disinfection¶ | □ | □ |
| | | □ | □ | □ |
| □ | B¶ | Cleaning¶ | □ | □ |
| | | Disinfection¶ | □ | □ |
| | | □ | □ | □ |
| □ | C¶ | Cleaning¶ | □ | □ |
| | | Disinfection¶ | □ | □ |
| | | □ | □ | □ |
| □ | D¶ | Cleaning¶ | □ | □ |
| | | Disinfection¶ | □ | □ |
| | | □ | □ | □ |

7. → Product Containers and Closures¶

Relevant aspects¶

- different products, their containers and closures¶
- OCI tests¶
- Routine process for testing container closure integrity¶

| Description¶ | Reference Documents¶ | |
|--|----------------------|------|
| | Title¶ | No.¶ |
| Container Type - Specification¶ | □ | □ |
| Closure Type - Specification¶ | □ | □ |
| Container System Qualification¶ | □ | □ |
| Container Closure Integrity Testing¶ | □ | □ |
| Routine tests for container closure integrity¶ | □ | □ |

Summary

Contamination Control Strategy is the collation of information you should already have

The intent is to collate into a single source, what has previously been decentralised

A central document should make it easier to evaluate and consider holistically for gaps and improvement opportunities

Regulators will be *very* interested in this document come inspection time

ECA have brought a simple set of tools to the public, which should be very helpful for those who are just starting their CCS journey.

Thank you
